

Listing of Claims:

This listing of claims will replace all prior versions, and listings of claims in the application.

1. (Currently Amended) A method executed in a computer system for completing an address, the method comprising the steps of: detecting an incomplete ~~user~~ input of the address; deriving a completion ~~string offer~~ to ~~said input the incomplete user input in~~ dependence ~~based~~ on a ~~determined~~ derivable score; and offering the derived completion ~~string offer~~ for completing the address;

wherein said score is determined as a combination of base score and context dependent address score;

wherein said base score is determined from the content of one or more of: a user's organizational context records, a user's address book, a user's incoming or outgoing mail records, and a user's address records;

and, wherein the context dependent address score is derived from the base score and from one or more of: a user typed address fragments, recently opened addresses, addresses used in recent communications, and recent completion corrections.

2. (Currently Amended) The method according to claim 1, wherein the completion ~~offer~~ string comprises a list of address completions, the list is ordered in accordance with the ~~derivable~~ determined score.

3. (Original) The method according to claim 2, wherein the step of offering comprises presenting the list of address completions.

4. (Canceled)
5. (Currently Amended) The method according to ~~any of the preceding claims~~ claim 1, wherein the ~~derivable~~ determined score is a context dependent address score.
6. (Original) The method according to claim 1, wherein the step of deriving comprises defining at least one possible address based on the incomplete user input.
7. (Currently Amended) The method according to claim 6, wherein the step of deriving further comprises assigning one context dependent address score to ~~the or~~ each possible address, and including ~~the or~~ each possible address in the completion string offer ~~in dependence on the or~~ sorted in accordance with the assigned context dependent address score.
8. (Canceled)
9. (Canceled)
10. (Currently Amended) The method according to claim ~~8~~ 1, wherein the base score decreases over time and thereby influences the derivable score.
11. (Original) The method according to ~~any of the preceding claims~~ claim 1, wherein the address is one of a mail address, an e-mail address, or a phone number.

12. (Currently Amended) A ~~computer program element comprising program code~~
~~means~~ program storage device tangibly embodying a program of instructions executable
by at least one processor for performing the method of detecting an incomplete input of
the address; deriving a completion string to said input based on a determined score; and
offering the derived completion string for completing the address;

wherein said score is determined as a combination of base score and context
dependent address score;

wherein said base score is determined from the content of one or more of: a user's
organizational context records, a user's address book, a user's incoming or outgoing mail
records, and a user's address records;

and, wherein the context dependent address score is derived from the base score
and from one or more of: a user typed address fragments, recently opened addresses,
addresses used in recent communications, and recent completion corrections.

13. (Canceled)

14. (Canceled)

15. (Canceled)

16. (Currently Amended) An apparatus for completing an address, the apparatus
comprising: means for detecting an incomplete ~~user~~ input of the address; means for
deriving a completion string offer to said ~~the incomplete user~~ input based on in

~~dependence on a derivable~~ determined score; and means for offering the derived completion ~~offer string~~ for completing the address,

wherein said score is determined as a combination of base score and context dependent address score;

wherein said base score is determined from the content of one or more of: a user's organizational context records, a user's address book, a user's incoming or outgoing mail records, and a user's address records;

and, wherein the context dependent address score is derived from the base score and from one or more of: a user typed address fragments, recently opened addresses, addresses used in recent communications, and recent completion corrections.

17. (Canceled)

18. (New) The method according to claim 1 wherein said base score is updated as a linear combination of the sum of each record changed, multiplied by a number assigned by a user to each such record, which is further multiplied by a base score prior to such change.

19. (New) The program storage device according to claim 12, wherein said base score is updated as a linear combination of the sum of each record changed, multiplied by a number assigned by a user to each such record, which is further multiplied by a base score prior to such change.

20. (New) The apparatus according to claim 16, wherein said base score is updated as a linear combination of the sum of each record changed, multiplied by a number assigned by a user to each such record, which is further multiplied by a base score prior to such change.
